

BUDDING GENIUS PRODUCT CATALOGUE

South Africa's first full spectrum Cannabis growing solution

At Budding Genius we offer the Home Grower an easy to follow but highly effective growing solution for Cannabis. We make the process of growing great bud more streamlined and more effective. Giving you, the Home Grower, a potent bud by bringing out the full potential of the plant, no matter what the genetic profile!

Our growing solution features 9 products, each tailored to the unique needs of the Cannabis plant. Each product for a different phase of its lifecycle. The nutritional demands of a Cannabis plant change as it grows, and these products have been uniquely formulated with life giving nutrients to offer maximum support at every phase.

You can use all of the products in the range, shown in order of use here from 1 to 9, or, if you are a more seasoned grower you can choose to focus on a few key growth phases by purchasing smaller sets.

Imagine during the last stretch of your plants growth, you have everything you need to ensure the best possible flowering and make a beautiful bud every time!

Our products can do this, and so much more. We are proud to present the Budding Genius range of products. Making your plants dance as they grow! Just beautiful!

1. Phytogrow

Phytogrow contains an astounding array of nutritional elements, vitamins, macro and micro nutrients and amino acids with a vast spectrum of phytochemicals all of which promote plant health and plant growth.

Phytogrow is not only food for plants but also for soil microbes which help your plant take up nutrition better. Microbe's breakdown whatever your plant can't digest in a form which plants can. Use in conjunction with organically inoculated soil mediums.

Phytogrow enhances fragrance particularly in tropical based cultivars known for their sweet aromatic fragrances. Phytogrow increases plants resilience to pest and disease, increases flower production and encourages root growth both in rate and root mass.

Phytogrow increases plant growth and yield dramatically thanks to fatty alcohol's that it contains which have the ability to enhance photosynthesis.

2. CannaMag

CannaMag is an organically chelated premium additive which improves cell health which increases leaf phototropism and helps protect against disease. Thus, a quicker recovery for those of you who choose to train their plants. Word of caution; don't feed plants after thinning (removing 1/3rd of plant vegetation). Give them 3- 5 days recovery time or at least 1-2 watering's before next feed.

CannaMag is instantly available for your plant to absorb via foliar feed or root drench. CannaMag contains nitrogen derived from amino acids and natural extracts which aid in stress resistance, creating an equilibrium of soil and flora and boosts protein synthesis.

3. Take Up

Take Up contains natural additives. Take Up promotes improved ion exchange accelerates nutrient absorption into plant roots through a natural process called mineral chelation. Low molecular weight Humic acids grab immobile & molecularly heavy minerals & transport them into plant tissues for faster growth and bigger yields.

4. Genesis

Genesis is an organic additive that is one of a kind, Genesis encourages root development and stem strength.

Genesis also improves plant health and vitality. A healthy plant = greater vegetative development and outstanding flower development improving size and colour. Add a large root system to the mix and you'll have one hungry baby on your hands ready to bulk up forming larger and more dense regimes (Buds) increasing your yield exponentially.

5. Set The Stage

Set The Stage is a magnificent full spectrum feed which contains macro and micro nutrients which are optimal for vegetative growth.

Set The Stage boosts plants production of chlorophyll which is vital for healthy growth and photosynthesis. Not only this Set The Stage fortifies plant cell walls increasing metabolism and triggers plant immune system to help defend against predators such as root feeding nematodes and disease pathogens in the medium/soil.

6. Gold Brix

Gold Brix is an organic additive that aids in symbiotic processes that improve plant and soil/medium microbiology which are activators to beneficial growth auxins and Phytohormones.

Gold Brix aids plants in retaining water and regulates plants internal cation-anion balance for healthy growth.

Gold Brix is readily available as a building block to secondary metabolites increasing production of resin glands for higher potency, aroma and taste.

Add to this optimal levels of brix, to protect your plant from being attacked by insect's disease and protection from frost. Then you truly have a product that meets the gold standard.

7. Fairy Dust

Fairy Dust is a highly concentrated bloom booster.

Fairy Dust increases size and density of flowers, initiates flower development and stimulates resinous oils and fragrance.

Add our vitamin secreta to the mix and you have a recipe for success, adding in carbohydrate production, better metabolism , increased phosphorus uptake and increased resistance from heat stress and overfeeding which is oh so important in the bloom phase.

8. MagUp

MagUp is an organically chelated magnesium additive. Magnesium is at the centre of every chlorophyll molecule. No chlorophyll=no photosynthesis!

This is most apparent during the bloom phase where we us high PK boosts which is a major threat in creating premature yellowing due to magnesium deficiency.

Premature yellowing hampers bud development and CO2 consumption= lower yields and lower quality. So, think of MagUp as insurance on your high value crop if used at the right dosage.

9. Trance

Trance is a highly potent organic feed that gives you're plant that kick it needs during the stretch period (transition).

Trance contains everything your plant needs to insure your lady's go into full bloom primed and ready.

Trance improves overall health, lush green new growth and betters root structure. Trance has the ability to induce full bloom sooner in some cultivars. So don't be surprised when harvest time is earlier than expected.

Trance also boosts bud sites for more even and larger sets thus increasing overall yield and quality. Leaving all the boys in awe while she dances her way to full maturity.
