## MCG SPECIALIZED MEDIUM

### About the product

Our MCG Specialized Medium is specifically designed for the cultivation of medicinal grade Cannabis.

In order to produce a top quality professional soilless medium, you need to ensure that, besides only using the best quality raw materials such as our Coco Peat and Perlite, the balance between PH, Water Holding Capacity, Air Porosity and EC is carefully monitored. We believe that we have achieved all of this with our medium.

In addition to all of this, our manufacturing process needs to be in accordance to a very high standard. We therefore produce our medium in an ISO 9001 / Food Grade Certified facility.

### 10 Reason to use our Medium

- 1) Consistency in product
- 2) Stable PH (Range 5.7 to 6.5)
- 3) Ideal Air Porosity and Water Holding Capacity
- 4) Low EC
- 5) Clean
- 6) Free of Pathogens and Parasites
- 7) Can be used in all stages of growth
- 8) Cost effective
- 9) Certificate of Analysis for each Batch
- 10) Batch numbers provided on each bag (Ensuring consistency)

**Pack size = 60 dm / Bag**

**Bulk Density = Approx 0.37 dm/ kg**

**Weight = Approx 22kg/Bag**

### How to use

Getting dialed is extremely important and we recommend the following tips:

- 1) Ascertain your starting PH of nutrient rich water
- 2) Then take a handful of medium and do a run off test using your Nutrient Rich water.
- 3) Ascertain the PH of the runoff.
- 4) This will then provide you with all the information necessary to make adjustments to your Nutrient Rich Water in order for you to reach your desired PH within the medium.
- 5) We do not advise that you reuse this medium. Once you have harvested, please discard.
