

HOW TO USE THE

DYNABALL™

Unit 16, Willow Park, 15 Willow Road,
Stikland, Western Cape, South Africa, 7530
+27 (0)87 265 7306 / www.pbrtrading.com

 **PBR**
Propagation • BioScience • Research

HOW TO PROPAGATE:

1. STRIP APPROXIMATELY 4CM OF THE TREE BARK AND DUST WITH THE DYNAROOT ROOTING GEL/POWDER.

2. FILL BOTH SIDES OF THE DYNABALL WITH A SOIL MEDIUM OF YOUR CHOICE.

(WE WOULD SUGGEST A COCOPEAT SUBSTRATE.)

3. PLACE THE DYNABALL OVER THE EXPOSED PART OF THE TREE AND CLOSE SECURELY WITH CABLE TIES.

4. WATER AS NEEDED.

5. AFTER APPROXIMATELY 14 DAYS, YOU WILL SEE ROOTS DEVELOP.

6. CUT THE BRANCH BELOW THE CLONING BALL AND PLANT IN ITS PERMANENT HOME.
